Existing Takes	135	135	48	240	240	0	0	79	79	365	498	498

1. The Middle Takaka allocation limit will be dependent on the TWS decision for the AMA Recharge zone allocation limit and how any available allocation in this regime is distributed within the contributing regimes
2. The water demand on the existing waiting lists is anticipated to be largely for irrigation use, so this number may also be represented in the plausible irrigation estimates. To avoid double accounting of this water the Waiting List number has been reduced to that above the plausible irrigation number.
3. The Waingaro numbers reflect that 69.9l/s of the waiting list reflects 69.9l/s of existing take that would be relinquished if the waiting list was granted (a zero net effect on total take in the Waingaro Zone). This transaction would result in the water take location moving from the Lower Waingaro to the Upper Waingaro area and into the AMA Recharge Zone. The AMA Recharge numbers therefore reflect this waiting list amount without any reduction to the existing take.
