

## STAFF REPORT

**TO:** Environment & Planning Committee

**FROM:** Neil Jackson, Policy Planner

**REFERENCE:** T202

**SUBJECT:** **ROAD HIERARCHY REVIEW – OCTOBER 2006 - EP06/11/05 -**  
Report Prepared for Meeting of 15 November 2006

---

### 1. BACKGROUND

The Engineering Services Committee 12 October 2006 meeting received a report on the review of the hierarchy of roads in the District. The hierarchy has five classes based on road function. These range from arterial roads which have a high through-traffic but low property access function, to access places which provide property access but no through-traffic function.

The road hierarchy is the basis for the road construction standards required by TRMP rule 18.10.3, and the hierarchy class for each road is shown on planning maps 160-168.

The road hierarchy classes shown on the planning maps need to be kept up-to-date, but that needs to be done through an RMA First Schedule process, with provision for public submission. It cannot be a simple in-house amendment to the maps. The reason for the public First Schedule process for amending the TRMP provisions is that the road hierarchy affects the standards to which landowners and developers are required to provide for and develop new roads when land is subdivided or developed.

### 2. PURPOSE OF THIS REPORT

The purpose of this report is to obtain Council approval to a variation to include the reviewed road hierarchy in the TRMP planning maps.

### 3. THE REVIEW PROCESS

The hierarchy was reviewed jointly by Rhys Palmer of MWH, Steve Elkington and Neil Jackson of TDC. The review was a desk-top exercise, comparing the TRMP planning maps and the RAMMs database, in light of the collective field knowledge of the review team.

The review process primarily re-evaluated the through-traffic and property access functions of each stretch of road identified in the RAMMS database.

At the Access Place level, consideration was also given to the number of lots served, and to the length of the road. If an Access Place served, or was likely to serve, more than 20 lots, it was re-classed as an Access Road. "Likely to serve" was judged on whether the zoning made further development probable.

In areas of urban subdivision, the review also considered the likely future function of roads. Some sections of road have only an Access Place function when an initial subdivision occurs, but may be later joined and have an additional through-traffic function when adjoining land is subdivided. The effect of traffic from Indicative Roads shown on the planning maps was also taken into account.

Tourist and recreational traffic were taken into account on some roads that would otherwise have a low property access function.

#### **4. RESULTS**

The results of the review are in the attached schedule. There are minor amendments from the schedule put to the Engineering Services Committee on 12 October, relating to:

- Aaron Creek Road (beyond the end of the seal)
- Collingwood – Puponga Main Road (beyond Seaford)
- Champion Road (between Hill Street and the reservoir)
- Hunt Terrace
- Lord Auckland Road
- Whiting Drive
- Old Mill Road
- Queen Street (between Hill Street and the Churchill Avenue sign, and between Salisbury Road and Gladstone Road)
- Tahi Street
- Tait Street
- Tophouse Road
- Chalgrave Street
- Fairfax Street

#### **5. RECOMMENDATION**

That Council proceed with a variation (or plan change, depending on the status of the TRMP at the time) to amend the road hierarchy maps 160 – 168, according to the attached schedule.

Neil Jackson  
**Policy Planner**

## SUMMARY OF PROPOSED TRMP ROADING HIERARCHY
